SPECIAL AUTOMATION MACHINERY

WELD FIXTURE for jacketed double-wall stainless steel shells used in manufacture of large high-pressure steam autoclave chambers. Components of the weldment are clamped in a specific sequence for efficient assembly by the welder.

CASTING MACHINE to pour molten lead into a mold cavity for producing negative grid plates used in telephone back-up batteries. This is a fully automatic indexing dial type machine with automatic part ejection from the mold. Molds are temperature controlled and heated with induction.
